# Installing a Salt Minion on Various Platforms

**GNU/\*nix**

**Largest installed base,  
most common case**

**Windows™**

**Same features,  
different file layout**

**Mac OS™**

**Software other than  
Homebrew packages  
require more tweaks**

# Targeting by Grain

## Running salt in the shell

```
# Only ping servers running Debian
$ sudo salt -G 'os:Debian' test.ping
```

```
# List the OS of every Minion
$ sudo salt '*' grains.get os
```

## webserver.sls

```
apache:
```

```
  pkg.installed:
```

```
    {% if grains['os'] == 'Debian' %}
```

```
    - name: apache2
```

```
    {% elif grains['os'] == 'RedHat' %}
```

```
    - name: httpd
```

```
    {% endif %}
```

# Talking Head

---

# Minion Installation

```
$ sudo install-salt.sh -P git v3000.3
```

# Minion Installation

```
$ sudo install-salt.sh -P -A master.ip.address  
-i my-minion-id git v3000.3
```

# Minion Installation

```
$ sudo install-salt.sh -P -A saltmaster.example.com  
-i carved-web-1 git v3000.3
```

# Talking Head

---

If no Minion ID is specified,  
the hostname will be  
used automatically.

# Upgrade the Master First

# Minion Upgrade Considerations

# Minion Upgrade Considerations

# Minion Deferred Restart

## **Scheduled restart after upgrade**

- salt-call with service.restart

## **Some Minion OSes require policy layers**

## **Simplified in more recent versions**

- salt cmd.run\_bg
- Enables deferred process restart

# Demo

Install the Minion on \*nix

Install the Minion on Windows

Security: verify keys on both ends

Basic command: test.ping

Adding grains to the Minion

Installing a package from  
the command line

Installing the Minion through salt-ssh

# Demo videos

---

# Grains Enable Selective Targeting

## **Built-in Grains**

OS, CPU type, kernel version,  
machine type (virtual or physical),  
network information,  
and many more

## **Custom Grains**

Physical location, data center name,  
date of installation, warranty or  
support information,  
essentially any arbitrary data

# Summary

**Installed the Master**

**Installed the Minion**

**Run basic commands**

**Coming up:**

- Targeting
- Package installation
- Synchronizing files
